

New blacker than black!

PRODUCT UPDATE FROM THE GLOBAL PAINT COMPANY

ChemSpec adds superb Deep Black toner to Metalux 2 range.

Metalux 2, the flagship automotive refinish range from ChemSpec, has added a brand new Deep Black basecoat toner (9300) to the already extensive range of toners that is like no other on the market.

This extremely deep black toner has a strong blue undertone which gives it the "blacker than black" look that many new cars are being released with. It can be used as a stand alone toner or can be mixed with other toners on the Metalux 2 mixing bank.

"We have achieved a very strong colour which is richer and bluer than most of our competitors," says ChemSpec Technical Director, Ralton Bentley.

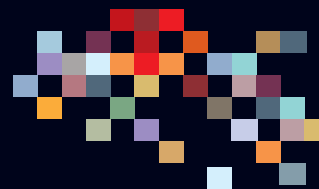

Metalux 2 products are reliable and offer the best value money can buy. Being a premium refinish range, in the same league as other leading international brands, you would expect this system to cost an unearthly amount. The good news is that by switching to Metalux 2 you end up paying half of what you would

normally spend on other premium systems without compromising quality, ease-of-use or performance.

"We have achieved a very strong colour which is richer and bluer than most of our competitors,"

Metalux 2 is also backed by the 4LIFE warranty so your customers will have ultimate peace of mind that their vehicles are in good hands. Don't waste any more money on over-priced systems that dent your pocket to the point where it affects your profit. Don't compromise quality and settle for inferior cheaper systems. Metalux 2 is the balance you've been looking for.

The new Metalux 2 Deep Black toner is already available in store. For more information about Metalux 2 or ChemSpec, visit www.chemspecpaint.com.
